**DETAILED ACTION**

This Office Action is in response to amendments and remarks filed May 9, 2011.

Claims 1, 3-9, and 11-19 are currently pending.

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gregory Sebald on July 15, 2011.

The application has been amended as follows:

In claim 1, amend "an image recording device" in line 7 to --the image recording device--

In claim 11, amend "a two-dimensional image recording device" in line 8 to --the two-dimensional recording device--

In claim 12, amend "an image recording device" in line 7 to --the image recording device"

***Allowable Subject Matter***

1. Claims 1, 3-9, and 11-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

In regards to claims 1 and 12, the prior art of record individually or in combination fails to teach the method for inspecting packaging for a liquid product as claimed, more specifically in combination with setting a packaging into rotation with respect to an image recording device, irradiating the package during rotation, making at least one series of at least two two-dimensional image recordings of at least a part of the content of the packaging during the rotation with the image recording device, the image recording device being suitable for making two-dimensional recordings at the predetermined wavelength for detecting displacement of undesired particles, wherein during a two-dimensional image recording, the packaging is situated in a predetermined rotational position relative to the image recording device, and wherein the packaging is situated in substantially the same rotational position relative to the image recording device during successive two-dimensional image recordings of the series.

Regarding claims 3-9, 13-17, and 19 are allowed because of their dependency on claims 1 and 12.

In regards to claim 11, the prior art of record individually or in combination fails to teach the system for inspecting packaging for a liquid product as claimed, more specifically in combination with a rotator for rotating the packaging relative to the two-dimensional image recording device, radiating means for irradiating the packaging during the rotation, a two-dimensional image recording device, the image recording device being suitable for making two-dimensional image recordings at the predetermined wavelength for making at least one series of at least two two-dimensional image recordings of at least a part of the content of the packaging during

the rotation for detecting displacement of undesired particles, wherein during a two-dimensional image recording, the packaging is situated in a predetermined rotational position relative to the image recording device, orientation determining means for determining the rotational position of the packaging for making successive two-dimensional image recordings of the content of the packaging with the packaging being in substantially the same orientation relative to the two-dimensional image recording device.

Regarding 18 is allowed because of its dependency on claim 11.

The closes art has been presented in previous office actions.

As well as, Drinkuth et al. (US RE28984), who teaches a foreign particle inspection device that takes successive images after rotating the bottle and stopping the bottle (see fig. 2 and 3, col. 3, lines 32-68 and col. 4, lines 1-14). Drinkuth does not teach imaging the package while the package is being rotated with respect to the imaging device.

Hedler (US 4608709), teaches an inspection device that images using a line scan camera images the container as it rotates (abstract). Hedler does not teach a two dimensional image at a predetermined rotational position, and does not teach successive images at the same rotational position.

Gomibuchi (US 5305391), teaches rotating a package and taking successive two dimensional images (abstract). Gomibuchi does not specifically teach successive images in the same rotational position and does not teach detecting displacement of undesired particles.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
